SUMMARY

Java Backend Developer with 4 years of IT experience and hands-on experience designing and building backend applications using Java, Spring Boot, REST APIs, Spring Security, Spring Data JPA, Hibernate, and MySQL. Built a full-stack e-commerce application with JWT-based authentication, transactional order processing, React integration, Docker containerization, and AWS deployment with CI/CD. Experienced in production application support and deployment activities, with a strong focus on backend development.

TECHNICAL SKILLS

Languages:

Java, SQL, JavaScript

Microservices:

RESTful Microservices, API Gateway, Eureka, OpenFeign

Testing:

JUnit, Mockito

Cloud:

AWS (EC2, RDS)

Backend:

Spring Boot, Spring MVC, Spring Security, REST APIs, Spring Data JPA, Hibernate

Databases:

MySQL

DevOps & Tools:

Docker, Git, GitHub, GitLab, GitHub Actions, GitLab CI/CD, Nginx

Frontend:

React, HTML, CSS, Tailwind CSS

PROJECTS

Taste of Bengal — Full-Stack E-Commerce Application

08/2026 – 09/2026

Java | Spring Boot | Spring Security | JWT | JPA/Hibernate |
MySQL | React | Docker | AWS

- Designed and developed a **full-stack e-commerce application** with a Spring Boot RESTful backend using layered architecture and a **React frontend** integrated through REST APIs.
- Implemented **JWT-based authentication and role-based authorization** using Spring Security, including access and refresh token mechanisms for secure user and admin operations.
- Developed REST APIs for **products, categories, shopping cart, and order management**, with **transactional order processing, stock validation, and JPA/Hibernate entity relationships** backed by MySQL.
- Containerized the backend using **Docker** and deployed it on **AWS EC2**, configuring **Nginx as a reverse proxy with HTTPS** for secure API communication.
- Built a **GitHub Actions CI/CD pipeline** to automatically build and deploy backend changes to AWS EC2 on pushes to the main branch.

PROFESSIONAL EXPERIENCE

Associate

06/2022 – Present | Chennai, India

Cognizant Technology Solutions

- Troubleshoot and resolve production application issues involving **Genesys, Salesforce permissions, call routing, and agent applications**, ensuring operational continuity.
- Support **Salesforce and Strata deployments** by executing and monitoring **GitLab CI/CD pipelines** and performing required post-deployment configuration and permission changes.
- Collaborate with cross-functional technical teams to **analyze incidents, identify root causes, and coordinate resolutions** for production issues.
